<b>Issued:</b>	August 22, 2016
<b>Effective:</b>	August 22, 2016
<b>Subject:</b>	Autism Benefit – Staff Qualifications
<b>Provision of Service Affected:</b>	Autism Benefit for Children Under 21 Years of Age
<b>Approved codes:</b>	Staff Qualifications Chart
<b>Guidance Usage:</b>	

The purpose of this Bulletin is to provide information on the staff qualifications for the coverage of Behavioral Health Treatment (BHT) services, including Applied Behavior Analysis (ABA), for children under 21 years of age with Autism Spectrum Disorders (ASD).

All children, including children with ASD, must receive Early and Periodic Screening, Diagnosis and Treatment (EPSDT) services that are designed to assure that children receive early detection and preventive care, in addition to medically necessary treatment services to correct or ameliorate any physical or behavioral conditions, so that health problems are averted or diagnosed and treated as early as possible.

The Centers for Medicare and Medicaid (CMS) approved the state plan amendment on 12/23/2015. The approval included ASD /ABA services that will be covered for children under 21 years of age under the EPSDT benefit.

## Board of Directors

Herbert C. Smitherman, Jr., MD,  
Chairperson  
Marsha Bianconi  
Constance Rowley

Dr. Cheryl Munday, Vice-Chairperson  
Angelo Glenn  
Dr. Iris Taylor

Bernard Parker, Treasurer  
Timothy Killeen  
Terence Thomas

Dr. Cynthia Tauog, Secretary  
Frank Ross  
Heather Underwood

**Thomas Watkins, President/CEO**

## **Background:**

Accurate and early diagnosis of ASD is critical in ensuring appropriate intervention and positive outcomes. The comprehensive diagnostic evaluation must be performed before the child receives BHT services. The comprehensive diagnostic evaluation is a neurodevelopmental review of cognitive, behavioral, emotional, adaptive, and social functioning, and should include validated evaluation tools. Based on the evaluation, the practitioner determines the child's diagnosis, recommends general ASD treatment interventions, and refers the child for a behavior assessment. The provider who conducts the behavior assessment recommends more specific ASD treatment interventions. These evaluations are performed by a qualified licensed practitioner working within their scope of practice and who is qualified and experienced in diagnosing ASD. A qualified licensed practitioner includes: a physician with a specialty in psychiatry or neurology; a physician with a sub-specialty in developmental pediatrics, developmental-behavioral pediatrics or a related discipline; a physician with a specialty in pediatrics or other appropriate specialty with training, experience or expertise in ASD and/or behavioral health; a psychologist; an advanced practice registered nurse with training, experience, or expertise in ASD and/or behavioral health; a physician assistant with training, experience, or expertise in ASD and/or behavioral health; or a clinical social worker, working within their scope of practice, and is qualified and experienced in diagnosing ASD.

The provider qualifications for the services provided under the Autism Benefit can be reviewed in detail using the MSA Bulletin 16-23.

The ASD Benefit is now including the use of tele-practice services. All tele-practice providers must be prior authorized by the Detroit Wayne Mental Health Authority **and** Michigan Department of Health and Human Services (MDHHS). Tele-practice is the use of telecommunications and information technologies for the exchange of encrypted patient data for the provision of services. Tele-practice must be obtained through real-time interaction between the child's physical location (patient site) and the provider's physical location (provider site). Tele-practice services are provided to patients through hardware or internet connection. It is the expectation that providers, facilitators, and staff involved in tele-practice are qualified and trained in the use of equipment and software prior to servicing patients.

Qualified providers of behavioral health services include Board Certified Behavior Analysts (BCBA), Board Certified Assistant Behavior Analysts (BCaBA), Licensed Psychologists (LP), Limited Licensed Psychologists (LLP), and Qualified Behavioral Health Professionals (QBHP). The QBHP may hold a master's degree in a Behavior Analyst Certification Board (BACB) approved degree category from an accredited institution. Providers of tele-practice services must be currently certified by the Behavior Analyst Certification Board (BACB), be a QBHP enrolled in a BACB degree program, be licensed in the State of Michigan as a fully licensed psychologist, or be a practitioner who holds a limited license and is under the direction of a fully licensed psychologist. Providers must ensure the privacy of the child and secure any information shared via tele-practice.

**Definition:**

**Taxonomy Codes and Definition:**

***Behavior Analyst – 103K00000X*** - A behavior analyst is qualified by at least a master's degree and Behavior Analyst Certification Board certification and/or a state-issued credential (such as a license) to practice behavior analysis independently. Behavior analysts provide the required supervision to assistant behavior analysts and behavior technicians. A behavior analyst delivers services consistent with the dimensions of applied behavior analysis. Common services may include, but are not limited to, conducting behavioral assessments, analyzing data, writing and revising behavior-analytic treatment plans, training others to implement components of treatment plans, and overseeing implementation of treatment plans.

***Behavior Technician - 106S00000X*** - The behavior technician is a paraprofessional who practices under the close, ongoing supervision of a behavior analyst or assistant behavior analyst certified by the Behavior Analyst Certification Board and/or credentialed by a state (such as through licensure). The behavior technician is primarily responsible for the implementation of components of behavior-analytic treatment plans developed by the supervisor. That may include collecting data on treatment targets and conducting certain types of behavioral assessments (e.g., stimulus preference assessments). The behavior technician does not design treatment or assessment plans or procedures but provides services as assigned by the supervisor responsible for his or her work.
